### VIII. FIRST AID

EYES	Hold eye open and rinse slowly and gently with water for 15-20 minutes. Remove contact lenses, if present, after the first 5 minutes, then continue rinsing eye. Call a poison control center or doctor for treatment advice.
SKIN	Take off contaminated clothing. Rinse skin immediately with plenty of water for 15-20 minutes. Call a poison control center or doctor for treatment advice.
INGESTION	Call poison control center or doctor immediately for treatment advice. Have person sip a glass of water if able to swallow. Do not induce vomiting unless told to do so by the poison control center or doctor. Do not give anything by the mouth to an unconscious person. Have the product container or label with you when calling a poison control center or doctor or going for treatment.
INHALATION	Move person to fresh air. If person is not breathing, call 911 or an ambulance, then give artificial respiration, preferably by mouth-to-mouth, if possible. Call a poison control center or doctor for further treatment advice.

ROUTES OF ABSORPTION	Inhalation, Skin, Eyes, Ingestion
HARMFUL	IF INHALED OR INGESTED
HARMFUL	IF EXPOSED TO SKIN OR EYES
ODOR THRESHOLD	No Available Data There is no data for irritation threshold. TCCA has the potential to be immediately dangerous to life and health.

### SIGNS, SYMPTOMS, AND EFFECTS OF EXPOSURE:

#### INHALATION:

Inhalation of this material is irritating to the nose, mouth, throat, and lungs. It may also cause burns to the respiratory tract with the production of lung edema which can result in shortness of breath, wheezing, choking, chest pain, and impairment of lung function. Inhalation of high concentrations can result in permanent lung damage. Chronic (repeated) inhalation exposure may cause impairment of lung function and permanent lung damage.

#### EYE:

Severe irritation and/or burns can occur following eye exposure. Contact may cause impairment of vision and corneal damage.

#### SKIN:

Dermal exposure can cause severe irritation and/or burns characterized by redness, swelling, and scab formation. Prolonged skin exposure may cause destruction of the dermis with impairment of the skin at site of contact to regenerate. Effects from chronic skin exposure would be similar to those from single exposure except for effects secondary to tissue destruction.

#### INGESTION:

Irritation and/or burns can occur to the gastrointestinal tract, including the stomach and intestines, characterized by nausea, vomiting, diarrhea, abdominal pain, bleeding, and/or tissue ulceration.

There are no known or reported effects from chronic exposure.

#### MEDICAL CONDITIONS AGGRAVATED BY EXPOSURE:

Asthma and respiratory and cardiovascular disease.

#### INTERACTIONS WITH OTHER CHEMICALS WHICH ENHANCE TOXICITY:

None known or reported.

#### ANIMAL TOXICOLOGY

##### Acute Toxicity:

Inhalation LC 50 - > 50 mg/l (rats, one hour exposure)  
Oral LD 50 - 490 mg/kg (rat)
